

Therapeutic Areas: Topical Preparation for Skin

We offer comprehensive preclinical testing of topical drugs using animal models of surgical wounds, burns, solar and allergic dermatitis. Our platform supports pharmacogenetic, toxicological, and dosage form evaluation for skin applications.

Disease Type	Animal Model / Study
Skin Trauma	Model of second-degree burn caused by scalding with hot water
	Model of pressure ulcer device-induced stage II bedsores
	Model of full cortical skin excision plus infection-induced trauma
