

Bio-Manufacturing

HiLand Biosciences provides integrated bio-manufacturing services spanning from early-stage research materials to GMP-compliant clinical and commercial supplies. Our platform supports a wide range of biologics, including recombinant proteins, antibodies, and ADCs.

Research & Development Material Production

Agile and Flexible Production for Early Development Needs

- Rapid delivery through transient transfection and batch-scale systems
- Capable of producing high-quality recombinant proteins and antibodies
- Supports preclinical evaluation and screening workflows

Pilot Scale Production

- Demonstrated expertise in scaling complex biologics
- Dedicated 500L facility operating under cGMP standards
- Supplies GLP-compliant material for toxicology studies and IND submission

Clinical and Commercial Manufacturing

Clinical Material Production

- Fully integrated cGMP facilities with up to 2,000L capacity
- Efficient tech transfer of upstream / downstream processes and analytics

- Onsite QC labs for DS, DP, raw material release, and environmental monitoring

Commercial Manufacturing

- Expansion to 3,000L and beyond with advanced automation
- Global-scale biologics production capabilities
- Digital management systems ensure quality and compliance
